

Microsoft AI principles

Designing AI to be trustworthy requires creating solutions that reflect ethical principles that are deeply rooted in important and timeless values. Learn how we are putting these principles into practice at Microsoft.

Fairness

AI systems should treat all people fairly

Inclusiveness

AI systems should empower everyone and engage people

Reliability & Safety

AI systems should perform reliably and safely

Transparency

AI systems should be understandable

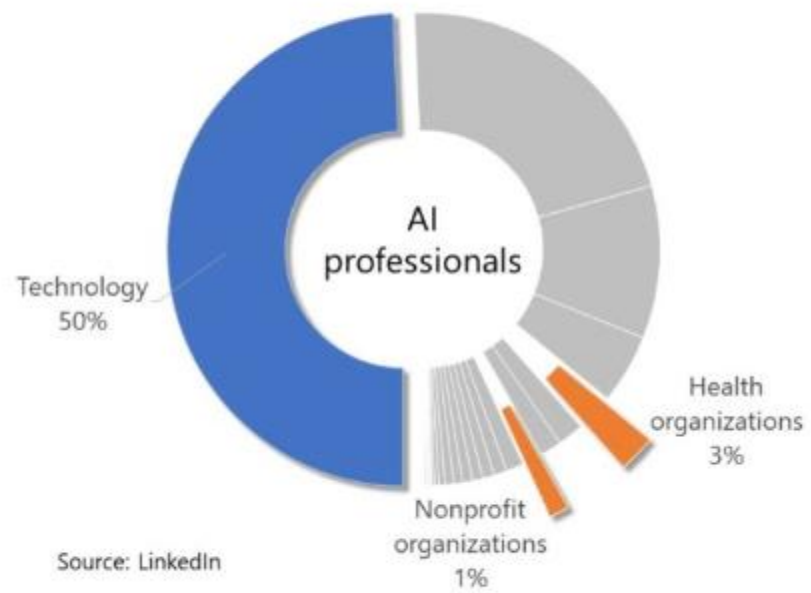

Privacy & Security

AI systems should be secure and respect privacy

Accountability

AI systems should have algorithmic accountability

AI professionals by sector worldwide
